

Feature Breakdown

Team	Index	Area	Feature Name	Description	Feature	
Avengers	1	Part Substitution	Part Substitution Matrix - Option 1 - Reuse Replacement Matrix? - Option 2 - Make a new Part Replacement Matrix - Option 3 - If client is not required, could these just live in the Bom?	If we reuse Replacement Matrix, then some changes may be needed to unique indexes/validation rules to accomodate parts that may appear in multiple places. How do we solve for client? Use market? Option 2 - Build F&O Menu, Form, Table, Security, and Data Entity for configuring part substitution rules and replicating that data for consumption by the Availability API	681046	
Avengers	2	Decision: Part or Part Type	Product or Equipmen	Product or Equipment Type Settings for JIT Lead Time	681055	

		Level Configurations	t Type Settings for JIT Lead Time		
Integration DAPI	3	BOM Lookup Filtered by Part Type	BOM Lookup Service by Part Type	From our new Parts Availability API, we need the ability to query the BOM by Device Sku and filter it by the part type(ie. equipment type such as BAT, LCM)	
Integration DAPI	5	Inventory Availability API (Central Orchestration)	Part Substitution Matrix - Availability API Logic	Add automatic part substitution priority logic into the central Availability API to expand BOM Parts into BOM Parts plus the Substitutions (no duplicates) with Priority indicator. No Best Version Filter needed!!	
Integration DAPI	6	Inventory Availability API (Central Orchestration)	Build Central Inventory Availability API to Query Americas and UBIF IVS	Build the core orchestration layer that sits between consumers (Service Bench, Horizon) and the backend IVS systems	
Integration DAPI	7	Inventory Availability API (Central Orchestration)	Consolidate Results into Single Response	Merge availability results from Americas IVS + UBIF IVS into a unified response	
Integration DAPI	8	Inventory Availability	Support 3rd Party	Handle both Asurion-owned parts (AOP) and Non-Asurion-owned	

		y API (Central Orchestra tion)	AOP and NAOP Use Cases Any weird ness with Part Sku mapping for Telus Mobile Klinik?	parts (NAOP) availability scenarios Recommend: Region Based Logic if US consider Americas(wli) and UBIF (uba,ubf) data. if not US, consider MXO/CAN Bom + Americas IVS Custom Data Source		
Integratio n DAPI	9	Inventory Availabilit y/Reserva tion API (Central Orchestra tion)	Service Bench External Location to IVS Instance and Organizati on and Site/Ware house Mapping	DAX API needs to solve which backend to call for a given service bench location Complexity: Americas WLI will have UBIF stores setup in external warehouse these need to be excluded from Americas IVS lookups as there will be zero inventory in America IVS. UBIF F&O will only have UBIF store data.		
Integratio n DAPI	11	Inventory Reservati on API (Central Orchestra tion)	Reservati on/Hold Capability	Support placing reservations or holds on parts as part of the availability flow Has to support both Americas and UBIF IVS now. Need to think thru any automatic		

				reservation cleanup jobs we have in Americas that need to be added to UBIF instance too.		
Integration	11.5	Fulfillment Order Flow for AOP	We need to add a JIT flag on lines with automatic transfer order creation	Service Bench will now be sending a JIT flag on the lines of the fulfillment order. When this flag is set a transfer order should be automatically created for the part(s) from WLI to the service provider. This feature is only scoped for AOP providers using real inventory skus and not something Americas should be handling for NAOP orders that use service parts.		
Configuration	12	Americas IVS Setup	Configure IVS Datasources for Canada and Mexico NAOP scenarios	Ingest Non-Asurion-owned parts inventory from external providers into the existing Americas IVS		
Configuration	13	UBIF IVS Setup	Configure and Deploy UBIF IVS for F&O	Stand up and enable the UBIF IVS instance for F&O data source (currently not enabled)		
Configuration	14	UBIF IVS Setup	Configure and Deploy UBIF IVS Datasource	Ingest inventory data from UBIF Legacy JSON Feeds into UBIF IVS I recommend we prioritize this as		

			e for UBIF Legacy	dead last and focus on Next Gen UBIF only.		
Integration ETL	15	IVS Data Source Hydration Pipeline 3rd Party Canada/Mexico NAOP Data Feed Integration	Service Bench will receive data and forward to DAX API or likely an SNS event process?	DAX API Will need to ingest the data to IVS		
Integration ETL	22	IVS Data Source Hydration Pipeline	UBIF Legacy JSON Feeds Ingestion Pipeline	Build ingestion pipeline for UBIF Legacy Stores JSON Feeds I recommend we prioritize this as dead last and focus on Next Gen UBIF only.		
Integration ETL	23	IVS Data Source Hydration Pipeline	Consolidate Americas and UBIF SUR Warehouse/IVS Instance/Company determination mapping rules	Technical exploration needed on how DAX API can access the data it needs to route between Americas IVS and UBIF IVS. - Americas company, site, warehouse lookup - Should be BAU but may need modifications to exclude UBIF flavored external warehouses - UBIF store site/warehouse/company lookup - UBIF Part Sku mapping from Asurion Sku		

Integration ETL	24	IVS Data Source Hydration Pipeline	Data Refresh Cadence and Sync Strategy	Define data refresh cadence and sync strategy (real-time vs batch) for each data source		
Avengers	25	Inventory Management UI - Phase 1	SUR Specific Menu Configuration	Build UI for managing Asurion-owned parts held by 3rd parties, toggled/viewed by Provider Location		
BeyondX	26	Inventory Management UI - Phase 1	On Demand Ordering - SKU Search and Transfer Order Creation	Search for SKU to create a Transfer Order from WLz to Provider		
Avengers	27	Inventory Management UI - Phase 1	Transfer Orders Returns Picking	Support Transfer Orders Receiving and Returns for both Serialized and Non-Serialized parts		
Avengers	28	Inventory Management UI - Phase 1	Transfer Orders Receiving	Support Transfer Orders Receiving and Returns for both Serialized and Non-Serialized parts		
Avengers	29	Inventory Management UI - Phase 1	Cycle Counting by Serial and Non	Support Parts Cycle Counting by Provider		

Avengers	30	Inventory Management UI - Phase 1	Security Restrictions to just the provider's warehouse (BAU?)	We need to ensure the AOP providers can only see their warehouses		
Avengers	31	Inventory Management UI - Phase 2	Single Pane of Glass - Customer Facing UI	Consolidate all inventory views into a single customer-facing UI		
Avengers	31.5	Inventory Management UI - Phase 2	Identity Guesting and F&O user/worker setup for AOP 3rd Party Workers	Identity Guesting and F&O user/worker setup for AOP 3rd Party Workers		
Avengers	32	Open Items / Spikes	BOM API Architecture Decision - Pending EA discussions	Decide if BOM Lookup should be wrapped into the Availability API or kept as a separate service		
Avengers	33	Open Items / Spikes	AOP JIT Reservation Decision	Decide if a reservation is needed for AOP JIT scenarios - leaning toward no reservation when inventory availability is false		

Avengers	34	Open Items / Spikes	Part Substitution Matrix vs Replacement Matrix decision	Decide if we want to leverage our existing replacement matrix feature for Part substitution matrix since they are very similar in concept aside from Part skus vs Device skus going in as data and having different data profiles.		
Avengers	35	Part Master Management Inventory Replenishment	Replenishment Levels
