

Single Source of Truth Inventory Availability

Use cases:

- Asurion owned parts (AOP)
- Non-Asurion owned parts (NAOP)
 - Mobile Clinic - RTI **webservice**
 - Mexico - RTI webservice
- UBIF Legacy Stores - JSON Feeds
- UBIF Next Gen Stores - JSON Feeds

Inventory Management UI Phases (DES, ISP, SUR)

Use cases:

- 3rd Party AOP Inventory Management
- On Demand Ordering
 - Search for SKU to Create a Transfer Order from WLI to Provider
- UBIF ISP Inventory Management
- ISP Pickup/Return ** - this may go to fulfillment team see Phase 2
- DES Inventory Management + Pickup
- Common Scenarios:**
 - Transfer Orders Receiving/Returns*
 - Inventory Counting (Phones vs Parts)
 - Serialized and Non-Serialized

Phases:

- Phase 1 - Leverage WMA for Back of House Flows and SUR AOP
 - Demo WMA on the Web to Prism team, see if they have ideas to gracefully merge into Prism UI
- Phase 2 - Single Pane of Glass for Customer-Facing

Breakout Meetings Requested

- Part Substitution Matrix KT
- Decision bom consolidation into the availability
 - current state:
 - in: client and device info
 - out: part list
 - future state:
 - could these live in our replacement matrix since onhand api already wraps it
- Peril mapping to part equipment type is handled by SB
 - to filter the Parts needed for a repair
- AOP JIT reservations and order placement improvements and
- Mobile Clinic/Mexico OEM Sku usage exploration and what to do with small part sku not stock scenarios for Telus
- Michelle may have confirmed that this is gonna work to just configure OEM in the BOM and let SB place orders with OEM skus
- Mobile Clinic have a GAP for small parts as they only provide skus and inventory for LCDs

Questions for SB Team

- Who will own Part Substitution Matrix going forward?
 - Will be moved to DAX System and wrap behind availability api
- is there JIT concept for AOP? Yes
- JIT from Distro- Answered below
 - JIT checks that the sku is sellable from Distro
 - Someone locally maintains qty of 1 for each Distro sellable sku inside ServiceBench
- JIT for Asurion WLI warehouse - Answered below
 - Checks if that sku is sellable in DAX warehouse
 - Someone locally maintains qty of 1 for each sellable sku inside ServiceBench
- Reservations for NAOP scenarios? No reservation concept today for NAOP
- How does 3rd Party NAOP send us Inventory Feeds?
 - Mobile Clinic - calls a webservice to push inventory via RTI, moving to Tyk
 - Mexico - calls a webservice to push inventory via RTI, not on plan to be moved to Tyk
 - UBIF - sends json events
 - Need to provide Public Tyk Api for these two external feeds
- Phase vs Big Bang discussion - see some options below
- Does SB use same service bench id for ISP stores and ubif store - Yes
- Identity Management for AOP Providers - do they have asurion email for login?
 - What Identity provider will Prism Elite UI have for these providers? Hydra, non-Asurion.com
 - Need to meet with Cory Plastek on if these could be guested into Asurion.com for WMA access

Go Live Strategies

- Phased or Big Bang
 - Americas AOP
 - UBIF Next Gen Only
 - Legacy UBIF would still flow via data feeds to SB
- Leverage feature flagging with fall back to BAU behavior in SB
 - Requires keeping feeds running during and after cutover
 - Gap - for Third Party AOP Inventory Management UI
- Recommended approach from team would be to toggle phase by Provider Location

Open Questions for DAX Team

- How do we solve Sku mapping in a shared place?
- Where to host the API? A: DAX APIs that support FSL/ISP will be reused
- Need to confirm custom feeds from NAOP sources.
- Do we tackle Reservations on IVS for Parts? Yes, for F&O sources.
- JIT - Distro Availability needs to be checked? - assumption No
- Do we want a new composite api for Part Availability that wraps Bom/Part Substitution or continue down the re-use onhand approach?
- Do we want to keep Reservation api call separate or combine into order creation ?
- Do we want to add a new order
